

# Biochemical Reagents

Biochemical reagents refer to any chemical that is found in a biological system or that can be used for biological research. Biochemical reagents include molecules like amino acids, vitamins and nucleotides that are essential to life. Biochemical reagents also include organic and inorganic chemicals that have life science applications. These reagents can be salts, detergents and other small molecules that have biological effects or are required for biological assays. Alfa Aesar offers a wide range of high purity biochemical reagents for life science research.

# ACS Grade Biochemical Reagents

ACS Reagents are high quality reagents for laboratory use. These reagents meet the specifications of the American Chemical Society Committee on Analytical Reagents. ACS specifications are listed in Reagent Chemicals: Specifications and Procedures. Alfa Aesar provides many ACS Reagents that have applications in life science research areas.

	33312	Ethylenediaminetetraacetic acid disodium salt dihydrate, ACS, 99.0-101.0%
	33314	Formaldehyde, 37% in aq. soln., ACS, 36.5-38.0%, stab. with 10-15% methanol
	36617	Formic acid, ACS, 96+%
	36462	Hexamethylenetetramine, ACS, 99+%
	40120	Hydrazine sulfate, ACS, 99.0% min
	33257	Hydrochloric acid, ACS, HCl 36.5-38.0%
	12497	Iron(III) chloride hexahydrate, ACS, 97.0-102.0%
	33315	Iron(III) nitrate nonahydrate, ACS, 98.0-101.0%
	14243	Lead(II) nitrate, ACS, 99.0% min
	36225	Lithium carbonate, ACS, 99.0% min
	36217	Lithium chloride, ACS, 99% min
	36216	Lithium sulfate monohydrate, ACS, 99.0% min

	11596	Magnesium sulfate heptahydrate, ACS, 98.0-102.0%
	36526	Manganese(II) chloride tetrahydrate, ACS, 98.0-101.0%
	J63214	N-(1-Naphthyl)ethylenediamine dihydrochloride, ACS
	J62643	Neutral Red, ACS
	36336	Nickel(II) sulfate hexahydrate, ACS, 98.0% min
	33262	Oxalic acid dihydrate, ACS, 99.5-102.5%
	33213	Phenol, ACS, 99+%, stab.
	33266	Phosphoric acid, 85% w/w aq. soln., ACS
	11595	Potassium chloride, ACS, 99.0-100.5%
	11594	Potassium dihydrogen phosphate, ACS, 99.0% min
	11593	Potassium hydrogen phosphate, ACS, 98.0% min
	13451	Potassium hydroxide, ACS, 85% min, K <sub>2</sub> CO <sub>3</sub> 2.0% max
	14311	Potassium sulfate, ACS, 99.0% min
	14318	Potassium thiocyanate, ACS, 98.5% min
	11554	Sodium acetate, anhydrous, ACS, 99.0% min
	11553	Sodium acetate trihydrate, ACS, 99.0%-101%
	33377	Sodium carbonate, ACS primary standard, 99.95-100.05% (dried basis)
	11552	Sodium carbonate, anhydrous, ACS, 99.5% min

	12314	Sodium chloride, ACS, 99.0% min
	11591	Sodium dihydrogen phosphate monohydrate, ACS, 98.0-102.0%
	14707	Sodium hydrogen carbonate, ACS, 99.7-100.3%
	13437	Sodium hydrogen phosphate, anhydrous, ACS, 99.0% min
	11592	Sodium hydrogen phosphate heptahydrate, ACS, 98.0-102.0%
	13455	Sodium hydroxide (low chloride), ACS, 97.0% min
	87683	Sodium pentacyanonitrosylferrate(III) dihydrate, ACS, 99.0-102.0%
	11560	Sodium sulfate, ACS, 99.0% min
	36489	Sodium tungsten oxide dihydrate, ACS, 99.0-101.0%
	36703	Starch, soluble, ACS (for iodometry)
	42785	Thymol Blue sodium salt, ACS
	31801	Tris(hydroxymethyl)aminomethane, ACS, 99.8-100.1% (Assay, dried basis)
	36439	Trisodium citrate dihydrate, ACS, 99.0% min
	12307	Zinc chloride, ACS, 97% min
	33399	Zinc sulfate heptahydrate, ACS, 99.0-103.0%

# Natural Products

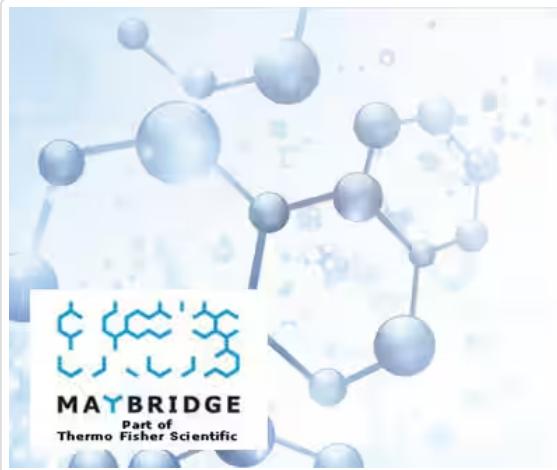

Natural products are molecules that living organisms produce or synthesize. These compounds are generally of interest because of their unique biological activity or physiological properties. They typically have complex structures with one or more stereochemical elements, varied functional groups and relatively large molecular weights. Natural products are often divided into two major classes, primary and secondary metabolites. Primary metabolites have an intrinsic function that is essential to the survival of the organism that produces them. In contrast secondary metabolites have an extrinsic function that mainly affects other organisms. Secondary metabolites are not essential to survival but do increase the competitiveness of the organism within its environment. Natural products can be isolated from natural sources, synthesized in a laboratory, or partially synthesized from a biological precursor. Alfa Aesar natural products include compounds such as alkaloids, steroids, and terpenes that are found in a variety of biological systems.

	J60205	Bovine Serum Albumin, 1mg/ml
	J61178	Brucine
	A16289	Canada balsam, natural filtered
	J60603	Carrageenan, iota type
	J64214	Casein, Hammarsten Grade
	J64482	Casein, high nitrogen, 95%
	H26557	Casein Peptone
	J65590	Casein sodium salt
	A13707	Casein, tech.

	A10164	Catechol, 99%
	J64143	Chitosan, 85% deacetylated
	A16155	Chlorophyllin, coppered trisodium salt
	A11470	Cholesterol, 95%
	J62050	Cholic acid sodium salt
	J13630	Cholic acid sodium salt, 97+% (dry basis), Ultrapure, Thermo Scientific
	A18796	(-)-Cinchonidine, 99% (total base), may cont. up to 5% quinine
	A17523	(+)-Cinchonine, 98+%, cont. up to 3% quinidine/dihydroquinidine and 3% quinine/dihydroquinine
	J65434	Coenzyme A trilithium salt, 95%
	J60218	Collagen, bovine achilles tendon
	J64182	Cortisone
	J62367	Croton oil
	B21573	Curcumin, 95% (total curcuminoid content), from Turmeric rhizome
	J62122	Cytochrome C, equine heart, 90+%
	A19666	Dehydrocholic acid, 99%
	J61458	Denatured salmon testes DNA, phenol extracted
	B20061	Deoxycholic acid, 99%

	J60840	Deoxyribonucleic acid, salmon testes
	J63691	Dexamethasone acetate
	H56648	D-Pinitol, 95%
	A14832	Elaidic acid, 98%
	A19778	Farnesyl acetate, mixture of isomers, 96%
	J63276	Fibrinogen, bovine
	B21983	Filter aid, Celite Standard Super-cel
	J61548	Gelatin, type A, 175 Bloom
	J63423	Gellan Gum
	A19864	Geranyl acetate, 98%
	A11830	Glycerol tributyrate, 97%
	A18579	Hematoporphyrin dihydrochloride
	A11165	Hemin (porcine), 97+%
	J63838	Hemoglobin, bovine
	A16198	Heparin sodium salt, from porcine intestinal mucosa, IU>=100/mg
	J62126	Hesperidin, 95%
	J60566	Hyaluronic acid, bovine vitreous humor
	A16292	Hydrocortisone, 98%

	A11411	Hydroquinone, 99%
	J61321	Insulin, from porcine pancreas, 97%
	J61844	Karaya Gum
	A10760	Kojic acid, 99%
	J63215	Lactalbumin hydrolysate
	J60576	Lecithin, 60%, egg
	J61675	Lecithin, 90%, soybean
	40318	Magnesium silicate monohydrate (Talc)
	H26694	Meat Peptone
	31911	Mineral oil
	J62592	Mineral oil, high purity
	J71600	Mineral oil, light, Molecular Biology Grade, Thermo Scientific
	J63859	Mucin, bovine submaxillary gland
	J60450	Myricetin, 98%
	L10163	Naringin hydrate, 98%
	A19166	(+)-Nootkatone, crystalline, 98+%
	J63404	Protein A, Staph. aureus
	J63982	Safflower oil, Carthamus tinctorius

A17074	Sodium cholate hydrate, 99%
J62288	Sodium deoxycholate monohydrate, 97%
41529	Sodium DL-lactate, 60% w/w aq. soln.
A18346	Sodium taurocholate hydrate, 96%
J61399	Soybean oil
J62428	Streptavidin, <i>Streptomyces avidinii</i>
J63668	Thaumatin, <i>Thaumatococcus daniellii</i>

J22292	Thrombin, human, Thermo Scientific
A18502	Tragacanth powder
J61626	Transferrin (Apo), bovine plasma, 98+%
J61046	Transferrin (Holo), bovine plasma, 98+%
B20490	Ursodeoxycholic acid, 99%
J60287	Yeast Extract

# Amino Acids and Derivatives

Amino acids are the building blocks of peptides and proteins. All amino acids contain an amine group, a carboxylic acid group, and a side-chain that varies for each amino acid. The side chains differ in polarity and pKa and are important to both protein structure and function. Amino acids can be classified into groups based on the chemical properties of their side chains: aliphatic, aromatic, basic, and acidic, and neutral. L-stereochemistry overwhelmingly predominates amino acids found in nature. Twenty amino acids are directly encoded by the genetic code of eukaryotes. Alfa Aesar offers a full line of amino acids in different grades and purities. We also offer a large range of amino acid derivatives to aid in the study of how amino acid modifications affect protein activity, structure and function.

# Peptides and proteins

Peptides are chains of two and up to 100 amino acids bonded by amide bonds between the carboxyl and amino groups of adjacent side chains. Peptides are key regulators of many biological functions including hormone release and many neurological processes.

Proteins are comprised of one or more peptide chains, typically folded into a globular or fibrous form in a biologically functional way. A protein's function is determined by its amino acid composition and also by its structure. Proteins have many different functions in biology including molecular transport, catalysis, and cellular signaling. Proteins can also have structural functions in cells. These structural proteins are frequently found in connective tissues such as cartilage, and also in hair, nails and animal shells.

Alfa Aesar offers an extensive range of peptides. Many are useful for the study of neuroscience, signal transduction and metabolism. We also offer a number of protein reagents for life science research.

C-Peptide promotes proper protein folding and disulfide bond placement during insulin biosynthesis. After synthesis is completed the peptide is cleaved. C-Peptide is a marker for $\beta$ cell function <i>in vivo</i> ; levels are enhanced in insulin resistance or insuloma and reduced in insulin insufficiency (type I diabetes).

# Carbohydrates and Derivatives

Carbohydrates are important biological macromolecules that consist of carbon, hydrogen, and oxygen in a 1:2:1 ratio. Carbohydrates are organic compounds organized in the form of aldehydes or ketones with multiple hydroxyl groups coming off the carbon chain. Carbohydrates are the most abundant organic compounds in living organisms. Their major function in living systems is the storage and transport of energy. They can also have structural, informational, recognition, and protective functions. Monosaccharides, the simplest carbohydrate units, are commonly known as simple sugars. Chains of more than one sugar are called oligosaccharides.

Carbohydrate derivatives are sugar molecules that have been modified with substituents other than hydroxyl groups. Examples include glycosylamines, sugar phosphates, and sugar acetates. Most sugar derivatives occur naturally and have important biological functions. For instance, chondroitin sulfate is an important structural component of cartilage and provides much of its resistance to compression. Alfa Aesar offers a large range of carbohydrates and carbohydrate derivatives.

3-Deoxy-D-glucosone is a highly reactive 2-oxoaldehyde intermediate of the Maillard reaction. It is produced during oxidative stress in response to excess sugar consumption and in association with diabetes. It is also derived from fructose, which is present in high levels in diabetic patients, by a self-condensation reaction. It is a precursor for the formation of advanced glycation endproducts.

# Vitamins

Vitamins are organic compounds required as nutrients in organisms. They are essential to normal metabolism. Organisms do not synthesize sufficient amounts of vitamins and must obtain them through their diet. Vitamins are classified by their biological and chemical activity, not their structure. Thus, each vitamin refers to a number of vitamer compounds that all show the biological activity associated with a particular vitamin family. Vitamins have diverse biochemical functions. Some vitamins, like vitamin D, have hormone-like functions as regulators of mineral metabolism while others, like vitamin E, function as antioxidants. Others still, like members of the B family of vitamins function as precursors for enzyme cofactors that help enzymes work as catalysts in metabolism. Alfa Aesar supplies the compounds that are vitamins in humans in several grades and purities.

# Fatty Acids

In biochemistry, a fatty acid is a carboxylic acid with a long unbranched aliphatic chain. The aliphatic chain may be either saturated or unsaturated. Chains of even numbered length predominate in nature. In biology, fatty acids are usually derived from triglycerides or phospholipids. Fatty acids are important components of cell membranes. When stored as triglycerides, fatty acids can be used as important sources of fuel for brain, heart and skeletal muscle cells. Alfa Aesar supplies a broad range of fatty acids for research use. We also provide fatty acid and lipid derivatives such as sphingosines, ceramides, and phosphatidyl inositol phosphates.
